

Betis Group Capabilities Statement

Serving Government Customers Since 1995

Our Mission – The Success of Yours

Betis Group, Inc. is a proven VAR, systems engineering, and systems integration company. Since 1995, we have provided exceptional performance on IT services contracts across the federal and commercial sectors, with focus on the Federal Aviation Administration and the Department of Defense (DoD). As a Small Business, we have performed as both a Prime and Subcontractor on government enterprise-level efforts that require a wide variety of technical and leadership experience. The Betis Team has supported our DoD clients at more than 100 facilities worldwide. We also provide IT products from thousands of leading OEMs through a Secure Supply Chain and are able to support contracts that require cleared personnel.

From enterprise core services, system O&M, DoDAF Enterprise Architecture, and software development, to tiered service desks, engineered solutions, system security certification, and Clinger-Cohen IT Portfolio Management, our company provides its clients with outstanding project managers and technical talent. We also have experience with NIST security control assessment, ITIL, and migration to a FedRAMP cloud.

Performance Summary

Federal Aviation Administration

- IM/IT Project Management
- COOP/DR & Business Continuity
- Configuration/Change Management
- Application Maintenance & Migration
- Database Administration
- Tier 3 & 4 Service Desk
- Enterprise Messaging Services
- SharePoint Development
- Asset Management
- Network Operations
- Information Assurance
- Certification and Accreditation
- Security Configuration/Management
- Strategic Planning
- Technology Roadmaps and Refresh
- Server and Application Virtualization
- Enterprise Architecture
- Technical Writing
- Software License/Warranty Management
- ITIL & ITSM Process Management
- Release Management
- Cloud Migration
- Training

U.S. Air Force

- IM/IT Project Management
- IT Business Case Analysis
- Service Oriented Architecture
- Analysis of Alternatives
- Management Consulting
- Lean/Six Sigma BPR
- Asset Management
- SharePoint Development
- Domain Data Ontology
- Semantic Web
- Balanced Scorecard
- DoD Architecture Framework

U.S. Army

- IM/IT Project Management
- Application Modernization
- Software Engineering
- End-user Functional Training
- Documentation & Field Support
- Enterprise Web Portal Services
- License & Warranty Management
- Emerging Technology Prototyping
- Technology Baseline Integration
- IT Deployment

Betis Group Capabilities Statement

Serving Government Customers Since 1995

Our Mission – The Success of Yours

FAA Enterprise Messaging

From 2001 through 2015, the Federal Aviation Administration (FAA) Air Traffic Organization (ATO) Messaging Services Program and Enterprise Messaging Services has chosen Betis Group to support strategic technology plans and policy, and enterprise messaging operations. Our experts with years of FAA domain knowledge and technical experience support Microsoft Exchange/Outlook and Lync software administration, project development, project deployment, testing, system engineering, security analysis, tier 4 service desk support, and lab and asset management application development. Our Team supported migration to the EMS365 cloud and now provides services related to designing, developing, delivering, testing, program planning, data collection, analysis of integration requirements, and operation of information systems.

Air Force Training Support

From 2008 to 2012, Betis Group provided a Team Lead and three service desk personnel to manage training technology operations for the 82d Training Wing at Sheppard AFB. The area of responsibility included more than 200 classrooms and nearly 9,200 individual IT assets ranging from rugged notebooks and desktops to Smart Boards, Elmo document cameras and networked multi-function printers. Our DoD 8570.1-compliant team supported instructors, staff, and students with remote and hands-on troubleshooting on the Air Force's standard desktop configuration. They also scheduled, coordinated and executed Moves/Adds/Changes for new equipment in classrooms, instructor offices and meeting rooms, and were responsible for IT hardware and software asset management.

Air Force Management Consulting

A Betis Group Senior Program Manager and two Business Analysts supported Air Force Air Education and Training Command A6 with strategic planning, business case and process analysis support, and technical management for various Command-level CIO-managed programs such as Data Center Consolidation, Information System integration and reduction, and the adoption of a Service Oriented Architecture (SOA). Our experts supported an initiative with the Air Force Chief Information Officer (SAF-CIO) and Air Force Director of Personnel (AF/A1) to spearhead training system integration and eliminate redundant student management applications using SOA technologies. The Betis Group Senior Program Manager was responsible for working with functional experts and training managers to develop DoDAF, business process models data and process dependency maps, and identify business process improvement opportunities based on the to-be architecture. We also supported an Air Force program to define formal ontologies and semantic data models for the Recruiting, Training and Education domain. We prepared targeted systems for integration with Joint Forces and DoD personnel systems, along with virtualization, consolidation, and code modernization using Service-Oriented Analysis and Design methodologies.

FAA Corporate Work Plan

Betis Group provides support for the Agency's CWP system. Contract scope includes Program and Project Management, IT Infrastructure and Operations Management, Help Desk and Help Desk Management Support, Change and Configuration Management, New System Implementation and Relocation Support, and Application Maintenance and Support. Our Team performs software patch maintenance and upgrades for Oracle 11g and Primavera R8.3. We also manage the software configuration management and release processes for CWP software, which includes APIs, database schemas, end user desktop baseline, Coldfusion and Java web applications, and user access and security permissions. The server stack includes Windows and Linux physical and virtual machines with guests in VMware, Windows Hyper-V, and Citrix.
